

**PUBLIC SCHOOL RETIREMENT SYSTEM
OF THE CITY OF ST. LOUIS**

DRAFT MINUTES OF THE BOARD OF TRUSTEES REGULAR MEETING

June 15, 2026

I. ROLL CALL AND ANNOUNCEMENT OF A QUORUM

The June meeting of the Board of Trustees of the Public School Retirement System of the City of St. Louis (PSRSSTL) was called to order at around 4:32 p.m. on Monday, June 15, 2026. The meeting was conducted by video conference through Zoom and Livestream on YouTube. Louis Cross, Chairperson of the Board of Trustees, was the presiding officer.

Roll Call was taken. Trustees Candice Carter-Oliver, Louis Cross, Kelly Dobell, Mary Donelson, William Heisse, Shanise Johnson, Yvette Levy, Albert Sanders, Andrew Vien, and Dorris Walker were present. The Board of Trustees had a quorum at the meeting. Trustees Christina Bennett and Jennifer Orr joined the meeting in progress. Trustee Emily Hubbard was absent.

Executive Director Susan Kane, Attorney Representatives David Eckhardt and Christine Sbrocchi, and Actuary Representatives Michael Ribble, Matthew Staback, and Blake Wilderman were also present.

Before the meeting began, Chairperson Cross requested a moment of silence for all the recently deceased members of the System.

II. APPROVAL OF MINUTES FROM LAST MEETING

Andrew Vien made a motion, seconded by Dorris Walker, to approve the minutes of the Regular Board of Trustees Meeting of April 20, 2026. By voice vote, the motion carried.

III. SEATING OF NEW MEMBERS

Chairperson Cross welcomed Kelly Dobell, appointed by the St. Louis Public Schools Board of Education, to the PSRSSTL Board of Trustees.

IV. READING OF COMMUNICATIONS TO THE BOARD OF TRUSTEES

None

V. PRESENTATIONS BY INTERESTED PARTIES

None

VI. CONSENT AGENDA

Andrew Vien made a motion, seconded by Dorris Walker, to approve the Retirement and Benefits of May and June 2026. By voice vote, motion carried.

Andrew Vien made a motion, seconded by Albert Sanders, to approve the refunds and bills of April and May 2026. By voice vote, motion carried.

VII. REPORT OF THE CHAIRPERSON

Chairperson Cross thanked the Trustees for their attendance at the Trustee meetings. He also thanked the Committees for their work and noted that he believed everything at the System was going well.

REPORT OF THE EXECUTIVE DIRECTOR

Executive Director Susan Kane noted that an updated contact list was included in the Board packet. This provides contact information for all Trustees and professional services representatives. She also explained that a handout of System summary information was also included in the packet. This is a resource for Trustees to use for their attendance at conferences.

The Executive Director then reviewed the business insurance policies that were expiring. The Workers' Compensation and Liability policies will term in July. The premium will increase by approximately 8% with no change in coverage except for the annual increases in property and building valuation. The fiduciary and crime policies will renew in August.

After all discussion was concluded, Albert Sanders made a motion, seconded by Christina Bennett to accept the renewal from Hartford for the Property and Workers' Compensation policies as recommended by Gallagher, the System's Business Insurance consultant, and to approve the 2026 Broker Fee.

A roll call vote was taken.

Christina Bennett	Yes	Candice Carter-Oliver	Yes	Louis Cross	Yes
Kelly Dobell	Yes	Mary Donelson	Yes	William Heisse	Yes
Shanise Johnson	Yes	Yvette Levy	Yes	Jennifer Orr	Yes
Albert Sanders	Yes	Andrew Vien	Yes	Dorris Walker	Yes

The motion was carried with twelve yes votes.

VIII. REPORT OF THE INVESTMENT CONSULTANT

None

IX. REPORT OF THE ACTUARY

Chairperson Cross introduced Michael Ribble to present the Annual Valuation report. Mr. Ribble introduced the members of the Gallagher team that will present the 2026 Valuation Report. He provided an overview of their presentation, which will include a discussion of the census, gains and losses of the plan, assumptions, and plan provisions.

The census showed an increase of 237 total members in the system, with notable changes in active members and terminated records. There was discussion on the number of non-vested terminated members with a balance. The Executive Director indicated that a campaign focused on those members who had been termed for several years would be conducted later this year. There will also be further discussion with the Trustees at upcoming meetings regarding sending the funds for those that have not been located to the State of Missouri Unclaimed property.

The presentation continued with a review of pension plan assets and liabilities as of January 1, 2026 and an explanation of how assets are valued using a five-year smoothing method to reduce volatility. The System's actuarial value was \$902 million with a 13% market return in 2026. After recognizing prior years' losses, the actuarial rate of return was 5%. The liability calculation showed a present value future benefit of \$1.5 billion, with an actual accrued liability of \$1.34 billion. The plan experienced a total loss of approximately \$45 million compared to expectations, primarily driven by higher-than-anticipated salaries and lower rate of terminations than projected.

Mr. Ribble presented an overview of the pension fund's financial status, explaining key terms including unfunded liability, funded ratio, and contribution requirements. He noted that while the actuarial market value ratio decreased from 68.5% to 67.3%, the market value ratio increased to 69.4% from 65.4%. He also explained the 15-year amortization method for paying down unfunded liabilities. Because of the System's liabilities and recognizing prior year's losses, the actuarially determined employer contribution increased to 14.5% of payroll. He noted that the recent law change that established a fixed employer contribution rate of 14% was beneficial for the long-term funded status of the plan. Finally, Mr. Ribble explained that the upcoming experience study, tentatively scheduled for December, will review and potentially adjust various actuarial assumptions including the expected rate of return, currently set at 7%.

After all discussion was concluded, Albert Sanders made a motion, seconded by Andrew Vien to accept the 2026 Actuarial Valuation Report as presented by the Actuary.

A roll call vote was taken.

Christina Bennett	Yes	Candice Carter-Oliver	Yes	Louis Cross	Yes
Kelly Dobell	Yes	Mary Donelson	Yes	William Heisse	Yes
Shanise Johnson	Yes	Yvette Levy	Yes	Jennifer Orr	Yes
Albert Sanders	Yes	Andrew Vien	Yes	Dorris Walker	Yes

The motion was carried with twelve yes votes.

X. REPORTS OF COMMITTEES OF THE BOARD OF TRUSTEES

Benefits Committee

Co-Chairperson Shanise Johnson shared that the insurance consultant is currently working on researching life insurance and long-term care insurance options for retired PSRSSTL members. These are two coverages that have been frequently requested by retired members when talking with PSRSSTL staff about insurance options. In her presentation, Ms. Johnson explained that the policies would be voluntary and paid for by the retired members selecting coverage. PSRSSTL would not be involved in the administration of the policies.

Trustee Business Committee

Co-Chairperson Andrew Vien reminded the Trustees of the Travel Expense Voucher form that was available for those requesting reimbursement for conference expenses.

Investment Committee

Investment Committee Co-Chairperson Christina Bennett reported that she attended the NASP conference, which was a great event. The format might be changing for future conferences from the

current three days. She and Investment Co-Chair Sanders recommended that Trustees attend the conference at least once.

Legislative, Rules & Regulations Committee

Co-Chairperson Dorris Walker requested that Attorney Representative David Eckhardt review the Rules and Regulations changes discussed at the June 2 Legislative, Rules & Regulations Committee. Mr. Eckhardt reviewed the changes that were part of new legislation passed during the 2026 legislative session. There was a change related to the number required for a quorum at a Board of Trustees meeting since the number of Trustees changed from 11 to 13 members. There was also a change being recommended to the ethics policy to formally state that System assets would not be used for supporting or opposing election ballot items. The final change was to add the ability for the Board Chairperson to add more than two Co-Chairs to PSRSSTL Board Committees.

Mr. Eckhardt explained the process of amending the rules. The final vote on the changes will be taken at a future Regular or Special Board of Trustees meeting.

Personnel & Professional Contracts Committee

Co-Chair Candice Carter-Oliver reviewed the timelines for the Investment Consultant and the Insurance Consultant RFPs. She asked the Executive Director to comment on the Actuarial Audit RFP. The Executive Director said that she was not aware that a prior Actuarial Audit had been completed but best practice suggested that one be completed every five years. She suggested completing an RFP to hire a firm to complete the actuarial audit in 2026 and then completing the RFP for Actuarial Services in 2027.

After all discussion had been concluded, Kelly Dobell made a motion, seconded by Candice Carter-Oliver to accept the changes to the RFP Schedule as recommended by the Executive Director.

A roll call vote was taken.

Christina Bennett	Yes	Candice Carter-Oliver	Yes	Louis Cross	Yes
Kelly Dobell	Yes	Mary Donelson	Yes	William Heisse	Yes
Shanise Johnson	Yes	Yvette Levy	Yes	Jennifer Orr	Yes
Albert Sanders	Yes	Andrew Vien	Yes	Dorris Walker	Yes

The motion was carried with twelve yes votes.

XI. NEW BUSINESS

None

XII. REPORT OF THE ATTORNEY

Andrew Vien made a motion, seconded by Albert Sanders, to close the meeting and that all records and votes, to the extent permitted by law, pertaining to and/or resulting from this closed meeting be closed under R.S.MO § 610.021 (1) for the purpose of having a confidential or privileged communication with the legal counsel for the PSRSSTL on legal matters.

A roll call vote was taken.

Christina Bennett	Yes	Candice Carter-Oliver	Yes	Louis Cross	Yes
Kelly Dobell	Yes	Mary Donelson	Yes	William Heisse	Yes
Shanise Johnson	Yes	Yvette Levy	Yes	Jennifer Orr	Yes
Albert Sanders	Yes	Andrew Vien	Yes	Dorris Walker	Yes

The motion was carried with twelve yes votes.

The meeting continued in the closed session. The Trustees did not vote on any motions in the closed session.

After all business concluded, Shanise Johnson made a motion, seconded by Dorris Walker, to open the meeting, pursuant to Section 610.021, of the Missouri Revised Statutes.

A roll call vote was taken.

Christina Bennett	Yes	Candice Carter-Oliver	Yes	Louis Cross	Yes
Kelly Dobell	Yes	Mary Donelson	Yes	William Heisse	Yes
Shanise Johnson	Yes	Yvette Levy	Yes	Jennifer Orr	Yes
Albert Sanders	Yes	Andrew Vien	Yes	Dorris Walker	Yes

The motion was carried with twelve yes votes.

XIII. ADJOURNMENT

Since there was no further business, Dorris Walker made a motion, seconded by Christina Bennett, to adjourn the meeting. By voice vote, motion carried, and the meeting adjourned at around 6:55 p.m.

Re: Actuarial Certification of January 1, 2026 Valuation

Dear Members of the Public School Retirement System of the City of St. Louis Board:

Gallagher has been retained to complete the actuarial valuation for the Public School Retirement System of the City of St. Louis ("System") for the plan year beginning January 1, 2026. The results of that valuation are included in this report.

The computations herein were performed as of January 1, 2026. They were determined on the basis of employee data and financial data furnished as of January 1, 2026 and December 31, 2025, respectively, by System staff. The actuary did not verify the data submitted but did perform tests for consistency and reasonableness.

The purposes of the valuation are to:

- (1) determine the required annual contributions from the board of education, the retirement system, and the charter schools; and
- (2) present the valuation results of the System as of January 1, 2026.

This report is submitted in accordance with Section 169.450-16 Revised Statutes of Missouri (R.S. Mo.). The required contribution to the System from the board of education, the retirement system, and the charter schools is computed in accordance with Section 169.490 R.S. Mo. Effective August 28, 2025, the statutory employer contribution for calendar year 2026 and each year after 2026 will be fourteen percent of the total compensation of all members employed by that employer. The amount of the required contribution is stated in Section 1.2: Required Annual Contribution. Information with respect to financial disclosures under GASB 67 and 68 may be found in a separate report.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions, in conjunction with member data and financial information provided to us by the System, to determine a reasonable and sound value for the System liability. The member data has not been audited, but it has been reviewed and found to be consistent, both internally and with prior years' data. The validity of the valuation results is dependent upon the accuracy of the data and financial information provided.

In our opinion, the actuarial assumptions used are reasonable, taking into account the experience of the System and reasonable long-term expectations. In our professional judgement, the combined effect of the assumptions is expected to have no significant bias. The actuary performs an analysis of System experience periodically and recommends changes if, in the opinion of the actuary, assumption changes are needed to more accurately reflect expected future experience. The Experience Study for the period January 1, 2016 to December 31, 2020 was prepared by Gallagher (previously known as Buck), and approved by the Board for use beginning with the January 1, 2022 actuarial valuation and will remain in effect for valuation purposes

Insurance | Risk Management | Consulting

until such time as the Board adopts revised assumptions. The next Experience Study will be based on the period from January 1, 2021 to December 31, 2025 and upon approval by the Board will be the basis of valuations performed from January 1, 2027 through January 1, 2031. A summary of all assumptions and methods is presented in Section 3.9 of this report.

Where presented, references to “funded ratio” and “unfunded accrued liability” typically are measured on an actuarial value of assets basis. It should be noted that the same measurements using market value of assets would result in different funded ratios and unfunded accrued liabilities. Moreover, the funded ratio presented is appropriate for evaluating the need and level of future contributions but makes no assessment regarding the funded status of the plan if the plan were to settle (i.e. purchase annuities) for a portion or all of its liabilities.

Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the economic and demographic assumptions, increases or decreases expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions or applicable law. Because of limited scope, Gallagher performed no analysis of the potential range of such future differences.

Gallagher prepared this report for use by the Retirement System and its auditors in reviewing the operation of the System, including the determination of contributions to be made to the System. Use of this report by other parties or for any other purpose may not be appropriate and may result in mistaken conclusions due to failure to understand applicable assumptions, methodologies, or the inapplicability of the report for that purpose. Because of the risk of misinterpretation of actuarial results, Gallagher recommends requesting its advance review of any statement, document, or filing to be based on information contained in this report. Gallagher will accept no liability for any such statement, document or filing made without its prior review.

Actuarial Standards of Practice (“ASOP”) 27 ask the actuary to disclose the information and analysis used to support the actuary’s determination that the assumptions selected by the Board do not significantly conflict with what, in the actuary’s professional judgment, are reasonable for the purpose of the measurement. In the case of the Board’s selection of expected return on assets (“EROA”), the signing actuaries have used economic information and tools provided by Gallagher’s Financial Risk Management (“FRM”) practice. A spreadsheet tool created by the FRM team converts averages, standard deviations, and correlations from Gallagher’s Capital Markets Assumptions (“CMA”) that are used for stochastic forecasting into approximate percentile ranges for the arithmetic and geometric average returns. It is intended to suggest possible reasonable ranges for EROA without attempting to predict or select a specific best estimate rate of return. It takes into account the duration (horizon) of investment and the target allocation of assets in the portfolio to various asset classes. Based on the actuary’s analysis, including consistency with other assumptions used in the valuation and the percentiles generated by the spreadsheet described above, the actuary believes the EROA does not significantly conflict with what, in the actuary’s professional judgment, is reasonable for the purpose of the measurement.

Actuarial Standard of Practice No. 56 provides guidance to actuaries when performing actuarial services with respect to designing, developing, selecting, modifying, using, reviewing, or evaluating models. Gallagher uses third-party software in the performance of annual actuarial valuations and projections. The model is intended to calculate the liabilities associated with the provisions of the plan using data and assumptions as of the measurement date under the funding rules specified in this report. The output from the third-party vendor software is used as input to an internally developed model that applies applicable funding rules to the derived liabilities and other inputs, such as plan assets and contributions, to generate many of the exhibits found in this report. Gallagher has an extensive review process in which the results of the liability calculations are checked using detailed sample life output, changes from year to year are summarized by source, and

Insurance | Risk Management | Consulting

significant deviations from expectations are investigated. Other funding outputs and the internal model are similarly reviewed in detail and at a higher level for accuracy, reasonability, and consistency with prior results. Gallagher also reviews the third-party model when significant changes are made to the software. This review is performed by experts within Gallagher who are familiar with applicable funding rules, as well as the manner in which the model generates its output. If significant changes are made to the internal model, extra checking and review are completed. Significant changes to the internal model that are applicable to multiple clients are generally developed, checked, and reviewed by multiple experts within Gallagher who are familiar with the details of the required changes.

The undersigned meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein and are available to answer questions regarding this report.

We believe that the assumptions and methods used for funding purposes are individually and in aggregate, a reasonable representation of anticipated experience under the plan and meet the parameters set by the Actuarial Standards of Practice (ASOPs). We believe that this report conforms with the requirements of the Missouri statutes, and where applicable, other federal and accounting laws, regulations and rules, as well as actuarial principles and practices in accordance with all ASOPs.

Sincerely,

Michael A. Ribble, FSA, EA, MAAA, FCA
Senior Vice President, Public Sector Retirement

Matthew Staback, FSA, EA, MAAA, CERA, FCA

Report Highlights

This report has been prepared by Gallagher to:

- Present the results of a valuation of the Public School Retirement System of the City of St. Louis (“System”) as of January 1, 2026; and
- Determine the required annual contribution for 2027.

This report is divided into four sections:

Section 1 contains the results of the valuation. It includes the experience of the System during the 2025 plan year, the actuarially required costs, and funded levels.

Section 2 contains asset information. It includes market value of assets, the calculation of actuarial value of assets, the expense & contingency reserve, and asset returns.

Section 3 describes the basis of the valuation. It summarizes the System provisions, provides information relating to the System members, and describes the funding methods and actuarial assumptions used in determining liabilities and costs. Also included is historical information about the System.

Section 4 contains the Actuarial Standards of Practice (ASOP) 51 disclosure and the Low-default Risk Obligation Measure required by ASOP 4. This section will provide insight of potential risks to the system.

Experience Gains and Losses

Actuarial gains (or losses) result from differences between the actual experience of the System and the expected experience based upon the actuarial assumptions. Annual gains (or losses) should be expected because short-term deviations from expected long-term average experience are common.

For the 2025 plan year, total (net) actuarial loss due to plan experience was about \$44.6 million. The experience may be broken into three components:

1. **Investment:** Approximate \$18.8 million loss is attributable to the System’s actuarial value of assets (AVA) rate of return on assets, which was 5.15% for plan year 2025, or 1.85% lower than the assumed rate of return of 7.00%. The loss resulted from returns being lower than expected. Although the Plan achieved a market value return of 13.13% during 2025, the large 2022 loss is still being recognized, resulting in the AVA return being below the expected 7.00%.
2. **Actuarial Liability:** Approximate \$20.1 million loss is attributable to the demographic experience of the Plan. The Plan experienced higher than expected reported compensation and lower than expected terminations during 2025, which were the main source of the loss.
3. **Other:** The Plan recognizes other gain/losses in addition to investment and actuarial liability through actual versus expected contributions and expense and contingency reserve. Approximate \$5.7 million loss is mainly attributable to the Plan’s actual contributions being lower than expected. The Plan’s actual expense & contingency reserve was lower than expected which offset the Plan’s actual contributions being lower than expected.

Insurance | Risk Management | Consulting

Actuarial Assumption and Method Changes

For the 2026 valuation, no assumptions or methods were changed. A detailed description of the actuarial assumptions and methods appears in section 3.9.

Normal Cost

The annual normal cost contribution with an interest adjustment increased from \$28.3 million in 2025 to \$30.4 million in 2026. This increase is primarily due to the large increase in covered payroll and increase in active population. Covered payroll increased from \$330.6 million to \$358.3 million. The annual normal cost rate as a percentage of covered payroll decreased from 8.56% in 2025 to 8.49% in 2026.

Amortization Payment of Unfunded Actuarial Accrued Liability

The actuarial accrued liability contribution is determined as the amount necessary to amortize the remaining Unfunded Actuarial Accrued Liability (UAAL). The Plan implemented a 15-year, level dollar, closed amortization period with layered amortization for future changes as of January 1, 2022. The initial UAAL as of January 1, 2022 will be paid off in 15 years from initial payment. Any deviations in UAAL due to actuarial gains and losses, assumptions changes, and plan amendments will be amortized over a new 15-year period. The total amortization payment with an interest adjustment increased from \$49.0 million to \$53.8 million. A detailed description of the layered amortization payments can be seen in section 1.3. The amortization payment component of the contribution rate increased from 14.83% to 15.00% of covered payroll. Under the plan's funding policy to determine the Actuarially Determined Contribution (ADC), we expect the ADC to increase as a percentage of covered payroll in the near term due to the recognition of the 2022 asset loss assuming no future gains or losses. After the 2022 asset loss is fully recognized, future ADC amounts are expected to decline as a percentage of payroll until after 16 years (one additional year of 2022 asset loss recognition, plus 15 years of amortization of the last year of recognition of the 2022 asset loss) when the unfunded is fully paid and then remain level as a percent of payroll. Absent future gains and losses and assuming the plan sponsor contributes the actuarially determined contribution, the funded status of the pension trust is expected to increase to 100% in 16 years (one additional year of 2022 asset loss recognition, plus 15 years of amortization of the last year of recognition of the 2022 asset loss). To the extent statutory contribution rates are less than ADC rates, additional actuarial losses will increase future ADC rates. Under the plan's current funding policy with statutory contributions, the plan is expected to be fully funded by 2039.

Actuarially Determined Employer Contribution

The Actuarially Determined Employer Contribution (ADEC) is determined annually and equals the normal cost with an interest adjustment plus the Amortization Payment of UAAL with an interest adjustment less expected member contributions. Expected member contributions for 2026 were 9.00% of covered payroll. For plan year 2026, the actuarially determined employer contribution is \$51.9 million as compared to \$47.6 million for plan year 2025. This increase is primarily due to the recognition of the 2022 loss, payroll being higher than expected, and growth in the active population. The total employer cost rate increased from 14.39% to 14.50% due to the changes described above.

The Actuarially Determined Contribution and Actuarially Determined Employer Contribution shown in this report are compliant with the definition of a reasonable actuarially determined contribution under ASOP 4 Section 3.21. The balance among benefit security, intergenerational equity, and stability or predictability of actuarially determined contributions, the timing and duration of expected benefit payments, the nature and frequency of plan amendments, and relevant input from the principal were taken into account when determining the actuarial cost method, smoothing period for the actuarial value of assets and the amortization period for any unfunded actuarial accrued liability.

Insurance | Risk Management | Consulting

Required Contribution and Timing

In 2001, the Board of Education agreed to institute a one-year lag for payments of the annual required contributions due from SLPS for future years. Therefore, this actuarial valuation is used to determine the annual required contribution (ARC) payment from SLPS for plan year 2026, due to the Plan no later than December 31, 2027. Due to legislation passed August 28, 2017, the contribution rate is set as a fixed percentage rather than an actuarially determined percentage. The dollar amount of the ARC due from SLPS no later than December 31, 2027 increased from \$26.5 million for plan year 2025 to \$32.2 million for plan year 2026. The increase in statutory required contribution amount resulted in the combined effects of an increase in the contribution rate due to recent legislation and higher covered payroll. Effective August 28, 2025, Section 169.490 R.S. Mo. changed the statutory employer contribution for calendar year 2026 and each year after 2026 to be fourteen percent of the total compensation of all members employed by that employer.

As a percentage of covered payroll in plan year 2026, the contribution rate increased from 12.50% for plan year 2025 to 14.00% for plan year 2026. Charter Schools pay both employer and member contributions as they occur shortly after each payroll period; therefore, this actuarial valuation is used to determine the contribution rate of 14.00% that Charter Schools should be paying beginning with payroll periods ending on or after January 1, 2026.

Analysis of the Valuation

(1) Investment Experience

Our actuarial calculations were based upon the assumption that the System's assets earn 7.00% for 2025. The approximate market value rate of return during 2025 was 13.13%. The approximate actuarial value rate of return was 5.15%. The actuarial value rate of return continues to account for the Plan's loss on assets in 2022, which will also impact the 2027 valuation due to five-year smoothing of asset experience.

(2) Demographic Experience

The number of active members increased from 5,121 to 5,260 for the period. The average service of active members increased from 6.9 to 7.0 years, the average age decreased slightly, and the average covered payroll increased by \$3,558 (5.5%). There were small changes in the inactive statistics. The membership statistics are provided in Sections 3.3 through 3.8 of this report.

(3) Salary Increases

The average covered payroll increased by 5.5% between January 1, 2025 and January 1, 2026. Total annual covered payroll increased by 8.4% between January 1, 2025 and January 1, 2026.

(4) Changes in Methods from the Prior Valuation

There have been no changes in methods since the prior valuation.

(5) Changes in Assumptions from the Prior Valuation

There have been no changes in assumptions since the prior valuation.

(6) Changes in Benefit Provisions from the Prior Valuation

There have been no changes in benefit provisions since the prior valuation.

(7) Other Changes

Effective August 28, 2025, Section 169.490 R.S. Mo. changed the statutory employer contribution to be 14.00% of the total compensation of all members employed by that employer.

(8) Summary

The overall effect of experience during the period resulted in a decreased change in the Entry Age Normal funding ratio utilizing the actuarial value of assets from 68.5% to 67.3%. The total actuarially determined contribution rate increased from 14.39% to 14.50% of covered payroll.

Insurance | Risk Management | Consulting

(9) Comments on the Valuation

The Plan experienced an investment loss due to unfavorable returns in 2022. However, the Plan was able to limit the volatility of the actuarially determined employer contributions (ADEC) and funded status with the Plan's actuarial value of assets, which smooth gains and losses over a 5-year period. Although the Plan experienced favorable returns from 2023 to 2025, the gains were not enough to outpace the 2022 loss. Unless significantly favorable asset returns occur during 2026, the Plan should anticipate an increase in the ADEC and a decrease in funded status in next year's valuation. This is due to the deferred loss from the 2022 asset experience, which is being smoothed into the actuarial value of assets over a five-year period, with 20% of the loss recognized annually from 2022 through 2026.

1/1/2026	902,985,100	1,340,909,770	437,924,670	67.3%	358,326,548	122.2%

²Actuarial Accrued Liability (AAL) method changed from Frozen Entry Age to Entry Age Normal level percent of pay effected January 1, 2022. AAL shown in the Schedule of Funding Progress table above is on an Entry Age Normal level percentage of pay actuarial cost method for all years.

Insurance | Risk Management | Consulting

Section 2 – Valuation of the System's Assets

This section of the report shows the development of the actuarial value of the assets of the System and provides information regarding the expense and contingency reserve, investment results and the various assets of the System.

The amount of assets used in the actuarial valuation is known as the "actuarial value of assets." The method is discussed in the summary of methods and assumptions, section 3.9. The development of the actuarial value of assets is shown in section 2.1. An important element in the development of the actuarial value of assets is the expense and contingency reserve. The amount of the reserve is determined pursuant to a policy adopted by the Board of Trustees. The history of the reserve is presented in section 2.2. A summary of member census information for the expense and contingency reserve can be found in section 3.5.

As shown in section 2.3, the fund had a rate of return of 5.15% on an actuarial value basis, which is 1.85% below the assumed rate of return of 7.00% for plan year 2025. The rate of return on an actuarial value basis is intended to be a more stable rate of return and fluctuate less than rates of return on a market value basis. The rate of return on an actuarial basis is not always a fair measure of the annual investment performance of the fund. Another indicator of actual performance during the year is the rate of return on a market value basis which was 13.13% for plan year 2025, also presented in section 2.3.

Insurance | Risk Management | Consulting

Section 2 (continued)

2.1 Development of the Actuarial Value of Assets

A.	Market value of assets (MVA) on January 1, 2025	\$ 877,055,352
B.	Member Contributions	31,144,414
C.	Employer Contributions	40,376,871
D.	Benefits paid	(112,147,335)
E.	Administrative Expenses	(2,133,555)
F.	Investment return (net of investment expenses only)	112,370,791
G.	Market value of assets on January 1, 2026	946,666,538
H.	Expense and Contingency Reserve as of January 1, 2026	15,815,433
I.	MVA on January 1, 2026 minus Expense & Contingency Reserve (G. - H.)	930,851,105
J.	Yield for the 2025 plan year based upon Market Value of Assets	13.13%
K.	Expected Return on Assets	\$ 59,922,600
L.	Gain/(Loss)	
(a)	2025	\$ 52,448,191
(b)	2024	15,550,984

(d)	2022	(169,223,026)
(e)	2021	N/A
M.	Amount to be Recognized	
(a)	2025	\$ 10,489,638
(b)	2024	3,110,197
(c)	2023	5,210,733
(d)	2022	(33,844,605)
(e)	2021	N/A
N.	Amount not Recognized	
(a)	2025 (La x 4/5)	\$ 41,958,553
(b)	2024 (Lb x 3/5)	9,330,590
(c)	2023 (Lc x 2/5)	10,421,468
(d)	2022 (Ld x 1/5)	(33,844,606)
(e)	2021 (Le x 0/5)	N/A
(f)	Total	27,866,005
O.	Actuarial value of assets at January 1, 2026, (I) - (Nf)	\$ 902,985,100
P.	Minimum Corridor of Actuarial Value of Assets (80% x I.)	744,680,884
Q.	Maximum Corridor of Actuarial Value of Assets (120% x I.)	1,117,021,326
R.	Actuarial value of assets at January 1, 2026 adjusted for limits	\$ 902,985,100
S.	Yield for the 2025 plan year based upon the Actuarial Value of Assets	5.15%

Section 2 (continued)

2.2 The Expense and Contingency Reserve

Effective January 1, 1996, the Board of Trustees revised Rule X, which governs the determination of the amount of the expense and contingency reserve. The expense portion of the reserve is the sum of:

1. The estimated annual operating expenses for the ensuing year;
2. An amount equal to the liability for non-insurance supplements;
3. An amount equal to the liability for insurance supplements for those participants participating in the program on January 1; and
4. The estimated amount of insurance supplements to be paid for participants expected to retire and participate in the program during the ensuing year.

The investment contingency portion of the reserve was established to help cover significant shortfalls in the actuarial rate of return. However, the entire contingency reserve was released in 2009.

Below is a history of the expense and contingency reserve:

January 1	Expense Reserve	Investment Contingency Reserve	Total Expense and Contingency Reserve
1998	\$ 30,891,555	\$ 24,100,041	\$ 54,991,596
1999	22,142,759	45,972,067	68,114,826
2000	27,992,032	50,003,862	77,995,894
2001	29,837,776	50,003,743	79,841,519
2002	23,527,529	50,003,743	73,531,272
2003	24,952,255	37,759,976	62,712,231
2004	26,028,780	37,759,976	63,788,756
2005	27,170,188	45,115,876	72,286,064
2006	32,534,770	45,115,876	77,650,646
2007	29,864,976	50,732,410	80,597,386
2008	31,987,370	57,234,574	89,221,944
2009	30,555,388	0	30,555,388

2021	30,004,728	0	30,004,728
2022	29,625,803	0	29,625,803
2023 ³	12,582,184	0	12,582,184
2024	12,837,383	0	12,837,383
2025	16,208,008	0	16,208,008
2026	15,815,433	0	15,815,433

³Effective January 1, 2023, expense & contingency reserve is calculated based on cost information and participant enrollment provided from the Plan including renegotiated rates under Medical Advantage. See section 3.8 for full details.

Section 2 (continued)

2.3 Investment Performance

There are several different methods of approximating the rates of return on investments of the trust fund. Following is a brief comparison of the actuarial assumed rate of return as compared with rates of return on market and actuarial value bases:

a) Market Value Basis

The rate of return on a market value basis is the ratio of the appreciation (or depreciation) of assets less contributions plus disbursements to the market value at the beginning of the year plus the average of the receipts and disbursements made during the year. This may be approximated as follows:

i.	A = Market value of assets as of January 1, 2025	\$	877,055,352
ii.	B = Market value of assets as of January 1, 2026		946,666,538
iii.	C = Contributions during the period		71,521,285
iv.	D = Distributions during the period		114,280,890
v.	Rate of return: $\frac{B - A + D - C}{A + 0.5 * (C - D)}$		13.13%
vi.	Actuarial assumed rate of return for 2025		7.00%
vii.	Difference between actual and assumed rates of return (v) - (vi)		6.13%

b) Actuarial Value Basis

The rate of return on an actuarial value basis is approximated using the same method:

i.	A = Actuarial value of assets as of January 1, 2025	\$	900,463,567
ii.	B = Actuarial value of assets as of January 1, 2026		902,985,100
iii.	C = Contributions during the period		71,521,285
iv.	D = Distributions during the period		114,280,890
v.	Rate of return: $\frac{B - A + D - C}{A + 0.5 * (C - D)}$		5.15%
vi.	Actuarial assumed rate of return for 2025		7.00%
vii.	Difference between actual and assumed rates of return (v) - (vi)		-1.85%

Insurance | Risk Management | Consulting

Section 2 (continued)

2.4 Summary of Investment Yield Performance

January 1	Market Value of Assets (MVA)	Actuarial Value of Assets (AVA)	MVA Rate of Return	AVA Rate of Return
2017	\$ 850,180,422	\$ 901,076,683	5.31%	5.51%
2018	914,082,259	899,816,911	15.22%	6.85%
2019	819,449,893	886,156,011	-4.69%	4.50%
2020	893,295,602	888,759,194	16.10%	6.56%
2021	914,776,954	894,251,149	8.85%	7.04%
2022	972,827,656	943,201,853	12.51%	11.76%
2023	817,867,979	940,664,216	-10.87%	3.31%
2024	848,169,915	916,023,414	10.29%	2.91%
2025	877,055,352	900,463,567	8.89%	3.24%
2026	946,666,538	902,985,100	13.13%	5.15%

The Plan's geometric average from January 1, 2017 to December 31, 2025 for market value of assets is 7.13% and for actuarial value of assets is 5.65%.

Insurance | Risk Management | Consulting

Section 3 – Basis of the Valuation

In this section, the basis of the valuation is presented and described. This information – the provisions of the System and the census of members – is the foundation of the valuation, since these are the present facts upon which benefit payments will depend.

The effects of administering the System's plan provisions have a direct impact on actuarial costs. The System uses the entry age normal actuarial cost method calculated on page 8 for actuarial funding and actuarial financial reporting purposes.

A summary of the System's provisions is provided in Section 3.1, the legislative history of the System is provided in Section 3.2, and member census information is shown in Section 3.3 to Section 3.8.

The valuation is based upon the premise that the System will continue in existence, so that future events must also be considered. These future events are assumed to occur in accordance with the actuarial assumptions and concern such events as the earnings of the fund; the number of members who will retire, die or terminate their services; their ages at such termination and their expected benefits.

The actuarial assumptions and the actuarial cost method, or funding method, which have been adopted to guide the sponsor in funding the System in a reasonable and acceptable manner, are described in Section 3.9.

A guide to actuarial terminology used in this report is included as Section 3.10.

Section 3 (continued)

3.1 Summary of Plan Provisions

Participants

All persons regularly employed by the board of education, charter schools, and members of the board of trustees are in the System.

Retirement Age

Normal

Age 65 or any age if age plus the years of credited service equals or exceeds 80 (Rule of 80).

Early

Age 60 with 5 years of service

Service Retirement Allowance

- a. 2.00% (1.25% if terminated prior to July 1, 1999 or 1.75% if hired on or after January 1, 2018) times years of credited service, subject to a maximum of 60%
- b. Times average final compensation (AFC)
- c. Subject to a maximum of 60% of AFC.
 - i. AFC is the highest average compensation for any three consecutive years of the last 10 years of service.
 - ii. Compensation is the regular wages plus what the employer pays towards the participant's health and welfare benefits.
 - iii. Minimum monthly benefit is \$10.00 for each year of credited service, up to 15 years, retirement age 65 and over.
 - iv. Unused sick leave is added to a participant's credited service and age.

Early Retirement Benefit

Service retirement allowance reduced five-ninths of one percent for each month of commencement prior to age 65 or the age at which the Rule of 80 (Rule of 85 if terminated prior to August 28, 2017) would have been satisfied had the member continued working until that age, if earlier.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.1 Summary of Plan Provisions

Disability Benefit

Service retirement allowance using actual service, or 25% of AFC if larger, provided that in no case will the benefit exceed that payable if service had continued to age 65.

- a. Disability must be incurred while a member as determined by the medical board and approved by the board of trustees.
- b. The participant must have a minimum of five years of credited service and not be eligible for normal retirement.

Continued disability is subject to routine verification.

Withdrawal Benefit

Accumulated contributions of participant with interest credited to the participant's account.

Vested Benefit

Full vesting on termination of employment after at least five years of service is provided if contributions are left with the System. The full accrued benefit is payable at age 65 or a reduced early retirement benefit prior to age 65.

Retirement Options

In lieu of the benefit paid only over the lifetime of the participant, a reduced benefit payable for life of participant with:

- | | |
|----------|--|
| Option 1 | Same retirement allowance continued after death to the beneficiary. |
| Option 2 | One-half of the retirement allowance continued after death to the beneficiary. |
| Option 3 | Same retirement allowance continued after death to the beneficiary. If the beneficiary predeceases the participant, the retirement allowance is adjusted back to the unreduced allowance. |
| Option 4 | One-half of retirement allowance continued after death to the beneficiary. If the beneficiary predeceases the participant, the retirement allowance is adjusted back to the unreduced allowance. |
| Option 5 | Increased retirement allowance is provided up to age 62, such that benefit provided prior to age 62 is approximately equal to the sum of the reduced retirement allowance paid after age 62 and Social Security. |
| Option 6 | Options 1 and 5 combined. |
| Option 7 | Options 2 and 5 combined. |

Insurance | Risk Management | Consulting

Section 3 (continued)

3.1 Summary of Plan Provisions

Survivor Benefits

If an active participant dies after completing 18 months of service, leaving a surviving spouse or other dependent beneficiaries, survivor benefits are payable. The widow or dependent beneficiary may elect to receive either a refund of accumulated contributions, or:

- a. A survivor who is the widow at least age 62 and married to a participant for at least one year receives \$60 per month.
- b. A widow with dependent, unmarried children under age 22 receives \$60 per month plus \$60 per dependent child, not to exceed \$180 per month. The benefit ceases when youngest child is age 22 and resumes again under (a) at age 62.
- c. If no benefits are payable under (a) or (b), minor children may receive a benefit of \$60 per child or \$180 divided among them if more than three children.
- d. If no benefits are payable under (a), (b) or (c), a dependent parent or parents may receive or share \$60 per month upon attaining age 62.

If an active participant dies after completing 5 years of service, the widow or dependent beneficiary may elect to receive either a refund of accumulated contributions or:

- a. If the survivor is the widow, a survivor benefit calculated as if the participant had been age 60 at death and elected Option 1, plus \$60 per dependent child not to exceed \$180 per month.
- b. If there is no widow, a survivor benefit calculated as if the participant had been age 60 at death and elected Option 1.

Return of Contributions upon Death

If after the death of a participant, no further monthly benefits are payable to a beneficiary under an optional form of payment, or under the survivor benefit provisions, the participant's beneficiary shall be paid the excess, if any, of the participant's accumulated contributions over all payments made to or on behalf of the deceased participant.

DROP

Effective July 1, 2001, active participants may elect to enter the deferred retirement option plan (DROP) for up to four years. Upon entering the DROP, the participant's retirement benefit is frozen and credited to the participant's DROP account. At the end of the DROP, or upon earlier termination of employment, the DROP account is paid in a lump sum or instalments, at the participant's option. During the DROP, the participant continues as an active participant, but does not pay contributions. To enter the DROP the participant must be age 65 or meet the Rule of 85. The DROP program is no longer available, ending June 30, 2008.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.1 Summary of Plan Provisions

Contributions by Participants

Participants hired before January 1, 2018 contribute 5.50% of compensation in 2018. This rate increases 0.50% per year until it reaches 9.00%. After this, the contribution rate will remain at 9.00% of compensation.

Participants hired on or after January 1, 2018 contribute 9.00% of compensation.

Accumulated contributions are credited at the rate of interest established by the board of trustees. The current crediting rate is 5% per year.

Contributions by Employers

The employer contribution rate will be set at a flat 14.00% of covered payroll for Plan year 2026 and each calendar year after 2026.

Changes in Provisions from Prior Valuation

None.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.2 Legislative History of the Retirement System

On and after January 1, 1944, all persons employed by the board of education on a full-time permanent basis are participants of the System as a condition of employment. In 1961, provisions regarding benefits and member contribution levels were revised for all future members of the board of education. Participants of the System at that time were granted the right to remain under the "old plan" and have their membership governed by the provisions of the law in effect prior to 1961. These old plan participants have both benefits and contributions based on a \$3,000 maximum annual compensation. Old plan participants have been given the option to transfer into the revised plan at various times since 1961.

Effective October 13, 1969, legislation permitted the reinstatement of credited service lost during the years 1944 to 1947 inclusive when the married women teachers rule was in effect.

Effective August 31, 1972, legislation resulted in the following changes:

- Purchase of past service credit by paying contributions for service claimed plus interest.
- Service as extended substitute teacher.
- Service of re-employed participants lost on prior terminations.
- Service out-state Missouri and outside the state of Missouri.
- Service lost by those who elected to stay out of the retirement plan either temporarily or to date.
- Old plan participants who wished to become new plan participants could do so by paying the differential in participant contributions under the new and old plans, plus interest.
- Dependent beneficiary on death of participant before retirement but after age 60 or age 55 with 30 years service may receive option 1 benefit as if participant had retired under such option.
- A participant with five or more years of service and prior to age 65 may be retired with a disability benefit if the medical board certifies that such participant is mentally or physically totally incapacitated for further performance of duty.
- Minimum retirement benefit at age 65 or after 10 years service is \$50.00 per month.

On February 10, 1975, the Missouri Supreme Court handed down a decision supporting HB 613 (Section 169.585 of state statutes), which granted increased benefits to retired teachers. The increases apply to those teachers who retired after June 30, 1957, and prior to January 1, 1971. Technically, those retirees are retained as "advisors and supervisor" and receive a "salary" of \$5 per month for each year of service, with a maximum of \$75. This salary plus the regular retirement benefit cannot exceed \$150 per month. To the extent that assets are depleted because of this law, future district contributions will increase. Because these benefits are paid as "salaries," coming out of investment income along with other expenses of operation, there will be less money available for crediting of interest to the various funds at the end of the year.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective August 13, 1978 legislation resulted in the following changes:

- The service retirement allowance and projected service retirement allowance was changed to 1-1/4% of average final compensation per year of credited service. The participant's allowance plus his Social Security primary insurance amount could not exceed 80% of his average final compensation. Participants born before 1917 receive the larger of the allowances calculated under the new formula and the formula in effect immediately before it.
- Credited service no longer limited to a maximum of 35 years.
- Two new joint and survivor optional forms of payment were added which provide for the participant's pension to be adjusted back to his unreduced pension in the event his spouse predeceases him.
- Contributions from participants shall be 3% of compensation.
- End of period for purchasing prior service or outside service extended from December 31, 1973 to December 31, 1980. Deleted requirement of electing to purchase out-state or outside the state of Missouri service within one year of completing five years of credited service.
- Gives board of trustees the power to establish regulations, methods and factors that may be needed to calculate primary Social Security benefits.
- Dependent beneficiary on death of participant before retirement with five or more years of credited service may receive option 1 benefit as if the participant had retired under that option as of the date of his death.
- Allow retired educational secretaries to serve as part-time or temporary substitute educational secretary up to a maximum of 360 hours per school year without a reduction in the retired member's retirement allowance or requiring the retired members to contribute to the retirement system.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective September 28, 1979, legislation resulted in the following changes:

- Accumulated and unused days of sick leave shall be included in computing a participant's age and credited service at retirement.
- Participants who have attained age 62 and who have 30 or more years of credited service may retire and receive a service retirement allowance without reduction for early retirement. The early retirement reduction for participants who retire with 30 or more years of credited service but who have not attained age 62 on their retirement date shall be determined on the basis of the number of months by which their age at retirement is less than age 62.
- Benefits to survivors of a participant who dies while a member and after having at least 18 months of credited service are as follows:
 - (a) Surviving spouse age 62 or over: \$60 per month.
 - (b) Surviving spouse with unmarried dependent children under age 22: \$60 per month, plus \$30 per month for each eligible child, with a maximum of \$150 per month.
 - (c) Unmarried dependent children under age 22: \$60 per month for each eligible child, with a maximum of \$120 per month. This benefit is payable if the benefit in (b) is not payable.
 - (d) Dependent parent(s): \$60 per month, provided no benefits are payable under (a), (b) or (c) above.

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective September 28, 1981, legislation resulted in the following changes:

- The provision limiting service retirement and projected service retirement allowances to 80% of average final compensation less Social Security was removed for future retirees.
- The minimum monthly benefit payable to participants retiring on or after age 65 with 10 or more years of service was increased to \$75.
- Old plan participants were extended the option to transfer into the current System by paying the difference in participant contributions plus interest. Such election to be made on or before December 31, 1984. Retired participants who retired prior to January 1, 1955, may be consultants at a "salary" equal to \$4 for each year of retirement prior to January 1, 1982. Total "salaries" as a "school consultant" and "special school advisor and supervisor" are limited to \$250 per month.
- The retirement system may contribute as part of its administrative expenses toward health, life and similar insurance for retirees.
- The actuarial cost method was changed from the "entry age cost method" to the "frozen entry age cost method." The period for amortizing "supplements" to the unfunded actuarial accrued liability was set at 50 years from the time the "supplement" is created.
- Several changes were made dealing with the administration and operation of the System.
- Investment powers were broadened.

Effective September 28, 1984, legislation resulted in the following changes:

- Dependent beneficiary on death of employed, active participant before retirement with five or more years of service may receive option 1 benefit as if the participant had attained age 55 (if less than 55 at his death) and had retired under option 1 as of the date of his death.
- In addition to the option 1 death benefit, a surviving spouse may receive \$30 per month for each unmarried dependent child, provided that the total benefit does not exceed the greater of \$150 or the option 1 benefit.
- Surviving spouse benefits do not cease on remarriage.
- Dependent children's benefits do not require that the child remain a full-time student.
- Participants retired on disability may elect to receive an actuarial equivalent benefit under options 1 through 4.
- Retired participants who retired on or after January 1, 1976, may be employed as school consultants and receive a salary and insurance benefits provided other retirants.

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective August 13, 1986, legislation resulted in the following changes:

- A participant with 30 years of credited service who is between the ages of 55 and 62, upon certification by the board of education, is eligible for a supplemental early retirement benefit payable to age 62. This provision remains in effect until December 31, 1991.
- Benefits to a surviving spouse for dependent children are increased from \$30 to \$60 per month, with a maximum of \$240 per month, including the \$60 for the surviving spouse.
- Supplemental pay to retired participants employed as "school consultants" is increased by \$2 per month for each year between the participant's date of retirement and December 31, 1986

Effective June 19, 1987, legislation resulted in the following changes:

- Reinstated the option for "old plan" participants to elect "new plan" membership by paying the difference in contributions accumulated with interest.
- Increased the minimum benefit for participants retiring on or after age 65 to \$10 per month for each year of credited service, up to a maximum of 15 years.
- Several changes were made dealing with the accounting, administration, and operation of the System.

Effective August 13, 1988, legislation resulted in the following changes:

- Made provisions for children's benefits uniform, providing \$60 per month per child, up to a maximum of \$180 per month, under both subsections 169.460(13) and (15) survivor benefits.
- Supplemental pay to retired participants of \$2 per month for each year of retirement up to December 31, 1988.

Effective June 14, 1989, legislation resulted in the following changes:

- The maximum on compensation was removed.
- Average final compensation is based on the highest three consecutive years, rather than the highest five consecutive years.
- Participants may retire with unreduced benefits at any age, if their age plus credited service equals or exceeds 85 (the "Rule of 85").

Effective May 31, 1990, legislation resulted in the following change:

- Supplemental pay of \$2 per month for each year of retirement up to December 31, 1990.

Effective August 28, 1993, legislation resulted in the following change:

- Supplemental pay of \$3 per month for each year of retirement up to December 31, 1993.

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective August 28, 1996, legislation resulted in the following changes:

- Provision was added for the purchase of service for certain periods of layoff.
- The investment trustee position was eliminated and the position of school administrator trustee was added.
- Cost-of-living increases for participants who retired prior to August 28, 1996, with at least 15 years of credited service. The cost-of-living increases are up to 3% in one year, with a cumulative maximum of 10%.
- The board of education is authorized to increase retirement benefits and the participant contribution rate, subject to several conditions.

Effective August 28, 1997, legislation resulted in the following change:

- Cost-of-living increases extended to participants who retired prior to August 28, 1997, with at least 15 years of credited service. The cost-of-living increases are up to 3% in one year, with a cumulative maximum of 10%.

In accordance with the statutory authority granted the board of education in 1996, the board of education made the following changes:

- Participant contributions were increased to 4.5%, effective July 1, 1998; to 5.0%, effective July 1, 1999; and, if necessary to 5.5%, effective July 1, 2000.
- The service retirement allowance was changed to 2.00% of average final compensation per year of credited service, subject to a maximum of 60% of average final compensation, effective for participants who retired after June 29, 1999.
- A “catch-up” cost-of-living adjustment (COLA) is provided for participants who retired prior to June 30, 1999, and survivors of participants who retired or died prior to June 30, 1999. The amount of the “catch-up” COLA is equal to 65% of the amount by which the participant’s original benefit would have increased due to increases in the CPI, in excess of any supplements or COLA increases being received by the participant. The “catch-up” COLA is effective July 1, 2000.
- The board of education agreed to contribute 8.03% of covered payroll for 1998, 1999, and 2000, in order to fund the benefit increase and the “catch-up” COLA.

In accordance with the statutory authority granted the board of education in 1996, the board of education made the following changes:

- Effective January 1, 2001, all participants who retired prior to January 1, 2000, received a 3% cost-of-living increase.
- Effective July 1, 2001, a DROP was made available until June 30, 2005, at which time the program will be evaluated to determine whether or not it should be extended. Eligible participants may elect to enter the DROP for up to four years.
- In conjunction with the DROP, employers will contribute at 8.00% of covered payroll for 2001. The contribution rate for subsequent years will be based on the rate determined by the actuarial valuation for the January 1 of the year preceding the year the contribution is due

Insurance | Risk Management | Consulting

Section 3 (continued)

3.2 Legislative History of the Retirement System

Effective August 28, 2002, legislation resulted in the following changes:

- Purchase of service rules were updated.
- The System may accept qualified transfers of funds for the purchase of service.
- Clarified provisions relating to charter school participation in the System.
- Option 5, the level income option is added.
- Replaced the specific actuarial cost method in the statutes with a provision that the method adopted by the board of trustees may be any method in accordance with generally accepted actuarial standards. The amortization period for the UAAL may not exceed 30 years.

Effective August 28, 2017, legislation resulted in the following changes:

- Replaced the normal pension eligibility requirement where a member's age plus credited service equals not less than eighty-five (the "Rule of 85") with not less than eighty (the "Rule of 80").
- For members hired for the first time on or after January 1, 2018, the multiplier in the annual pension benefit formula (credited service x pension multiplier x average final compensation) was reduced from two percent (2%) to one and three-fourths percent (1.75%).
- Beginning January 1, 2018, the member contribution rate of five percent (5%) of compensation shall increase by one-half of one percent (0.5%) annually until such time as the percentage equals nine percent (9%).
- For member's hired for the first time on or after January 1, 2018, the member contribution rate shall be nine percent (9%) of compensation.
- For calendar year 2018, the actuarially determined annual employer contribution rate shall be replaced with sixteen percent (16%) of total member compensation for each employer which, for each calendar year thereafter, shall decrease by one-half of one percent (0.5%) until calendar year 2032, when the annual employer contribution rate shall equal nine percent (9%) of total member compensation for each employer for that year and all subsequent years.

Effective August 28, 2025, legislation resulted in the following changes:

- For calendar year 2026 and each calendar year after 2026, the rate of contribution payable by each employer shall equal fourteen percent of the total compensation of all members employed by that employer.

Section 3 (continued)

3.9 Summary of Methods and Assumptions

The following assumptions and methods were selected by the Board and used in this analysis. The plan's actuaries perform an experience study every 5 years and discuss anticipated future trends with the Public School Retirement System of the City of St. Louis, Missouri to ensure appropriate and reasonable assumptions and methods for the purpose of the measurement. The last experience study was completed in December 2021.

Interest

7.00% per annum, which includes a 2.50% allowance for inflation; 7.00% is net of investment expenses.

Participant Account Interest Crediting Rate

2.0% per annum.

Expenses

The rate of investment return assumed is net of investment expenses. Expected administrative expenses based on actual administrative expenses in the prior year. Administrative expenses are paid out of the expenses and contingency reserve determined in Section 2.2.

Mortality – Healthy Lives

PubG-2010 (Below Median) Mortality Table, amount weighted, projected fully generationally using projection scale MP-2021. The mortality assumption for retired participants receiving benefits is increased by 2% for males and 10% for females.

Beneficiary Mortality

PubG-2010 (Below Median) Mortality Table, amount weighted, projected fully generationally using projection scale MP-2021.

Disability Mortality

PubT/G-2010 Mortality Disability Table, amount weighted, projected fully generationally using projection scale MP-2021.

Section 3 (continued)

3.9 Summary of Methods and Assumptions

Withdrawal

Withdrawals are assumed to occur at rates based on actual experience of the retirement system. During the first five years of membership, withdrawals are assumed to occur at the following rates:

Year of Membership	Non-charter school members	Charter school members
1 st	22.5%	35.0%
2 nd	22.5%	30.0%
3 rd	20.0%	25.0%
4 th	20.0%	20.0%
5 th	15.0%	20.0%

The rates used after the first five years of membership are shown in Table 1.

Salary Scale

Salaries are assumed to increase at the rate of 5.0% per year for the first 5 years of employment and 3.50% thereafter.

Disability

Disabilities are assumed to occur at rates based on the actual experience of the retirement system. The rates used are shown in Table 3.

Retirement

Retirements occur at rates based on the actual experience of the retirement system. The age-related rates used are shown in Table 2. The rates are different for those eligible to retire under the Rule of 80 and those not eligible to retire under the Rule of 80.

Deferred Vested

The liability for deferred vested members is assumed to be 125% of the member's total accumulated contributions.

Nonvested Terminations

Members that have total accumulated contributions of under \$200 are valued as nonvested terminations.

Optional Form

The optional form selected at retirement is assumed to be a single life annuity.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.9 Summary of Methods and Assumptions

Family Structure

The probability of a participant being married, and the probable number of children are based on a table constructed by the Social Security Administration, modified to reflect the experience of the retirement system. The rates used are shown in Table 4. For married participants, husbands are assumed to be 3 years older than their wives.

Gender

Members with no gender provided in the member data by the System are assumed to be female.

Usage of Cash-out Option

Participants terminating in vested status are given the option of taking a refund of their accumulated participant contributions instead of a deferred retirement benefit. Active members who terminate in the future with a vested benefit are assumed to take a deferred vested annuity, unless a refund of contributions and interest is greater than the actuarial present value of their vested deferred benefit.

Future Benefit Increases or Additional Benefits

When funding is adequate, the Board may authorize cost of living adjustments (COLAs), as noted in the summary of plan provisions. This valuation assumes that no future COLAs will be awarded.

Actuarial Valuation Method – Entry Age Normal

Entry Age Normal cost method. Under this method, the actuarial value of projected benefits for each individual participant is allocated as a level percentage of compensation over the working lifetime of the participant between the date of employment and assumed date of exit.

Amortization of Unfunded Liability

Amortization is based on a 15-year closed, level dollar amount. All future changes in the accrued liability due to amendments, experience gains and losses, and assumption changes are amortized over a 15-year closed, layered method. The initial amortization base was created for the unfunded actuarial accrued liability as of January 1, 2022.

Employer Contribution – Interest Adjustment

The total contributions include an interest adjustment of one-half year's interest at the valuation interest rate to better reflect timing of contributions.

Section 3 (continued)

3.9 Summary of Methods and Assumptions

Valuation of Assets

The actuarial value of assets is based upon a smoothed market value method. Under this method, asset returns in excess of or less than the expected investment return on market value of assets will be reflected in the actuarial value of assets over a five-year period. The plan's actuarial value of assets will be set equal to the plan's market value of assets less the expense and contingency reserve as of January 1, 2022. The calculation of the Actuarial Value of Assets is based on the following formula:

$$MV - 80\% \times G/(L)1 - 60\% \times G/(L)2 - 40\% \times G/(L)3 - 20\% \times G/(L)4 - \text{Expense and Contingency Reserve}$$

MV = the market value of assets as of the valuation date

$G/(L)i$ = the asset gain or (loss) for the i -th year preceding the valuation date

Expense and Contingency Reserve

Medicare - Inactive

The Medicare portion of the Expense and Contingency Reserve is based on estimated costs provided by the Plan as of January 1, 2026. The Plan's monthly cost for members who are not covered under Medicare Advantage or covered under Medicare Advantage and include covered for spouse or child is assumed to remain the same in future years. The Plan's monthly cost for members covered under Medicare Advantage – members only are assumed to be as follows:

Year	Plan's Monthly Cost
2026	\$ 60
2027	\$ 70
2028+	\$ 80

Dental and Vision - Inactive

The dental and vision portion of the Expense and Contingency Reserve is based on actual costs provided by the Plan as of January 1, 2026. It is assumed the costs in which the Plan will cover in the form of a subsidy will remain the same in future years.

Medical, Dental, and Vision - Active

50% of active members are assumed to elect medical, dental, and vision in the future. The total premium for these three equals \$89.10 based on current plan cost for members not in Medicare Advantage. The 50% assumption is based the number of current inactive members who elected Medicare coverage.

Changes in Methods and Assumptions from the Prior Valuation

Section 3 (continued)

3.10 Definition of Actuarial Terms

Accrued Benefit

The benefit earned by a participant as of the date at which the determination is made payable in the form of an annual benefit commencing at normal retirement age. The accrued benefit is payable for the member's lifetime only, however if the total monthly payments at the member's death are less than contributions accumulated with interest, the remaining member contribution balance will be paid to the member's beneficiary.

Accumulated Plan Benefits

The accrued benefits and any other benefits, whether vested or not, that have been earned by the participants covered by the plan as of the date at which the determination is made. These other benefits include any death, early retirement or disability benefits provided under the plan.

Actuarial Accrued Liability

Equal to the actuarial present value of future benefits less the present value of future annual normal costs.

Actuarial Cost Method

The method for allocating the actuarial present value of a pension plan's benefits and expenses to various time periods. An actuarial cost method is also referred to as a funding method.

Actuarial Gain/(Loss)

The difference between the plan's actual experience and that expected based upon a set of actuarial assumptions. A gain occurs when the experience of the plan is more favorable (in terms of cost) than the assumptions projected; a loss occurs when experience is less favorable. May also be referred to as experience gains/(losses).

Actuarial Present Value

See present value.

Actuarial Valuation

The determination, as of a valuation date, of the annual normal cost, actuarial accrued liability, actuarial value of assets and related actuarial present values for a pension plan.

Actuarial Value of Assets

The value of cash, investments and other property belonging to a pension plan determined by the actuary for the purpose of an actuarial valuation. Actuarial asset methods are generally designed to reduce fluctuations in asset value due to large variations in returns from year to year. Actuarial values are generally a smoothed market value that recognize gains and losses over time.

Amortization

The spreading of a present value or a cost over a period of years. A plan's unfunded actuarial accrued liability is amortized over a period of years.

Insurance | Risk Management | Consulting

Section 3 (continued)

3.10 Definition of Actuarial Terms

Fiscal Year

The year on which the plan sponsor maintains its financial records.

Funded

Provided by plan assets. A liability is fully funded when assets exceed or equal the liability.

Normal Cost

That portion of the actuarial present value of pension plan benefits and expenses which is allocated to a valuation year by the actuarial cost method.

Normal Retirement Age

An age defined in the plan for purposes of establishing when a terminated participant is entitled to an accrued benefit.

Normal Retirement Benefit

The benefit payable when it commences at the normal retirement age.

Participant

A person covered by a pension plan in accordance with its terms including active participants, retired participants and beneficiaries, vested terminations, and vested transfers.

Plan Year

The year on which the plan maintains its financial records.

Present Value

The value of an amount or series of amounts payable at various times, determined as of a given date by the application based on a particular set of actuarial assumptions. It is a single sum which reflects the time value of money and the probabilities of payment.

Rate of Return

The actual or expected investment income as a percentage of a plan's average assets.

System

Public School Retirement System of the City of St. Louis, Missouri.

Unfunded Actuarial Accrued Liability

The excess of the actuarial accrued liability over the actuarial value of assets.

Vested Benefit

A benefit that is not forfeited if the participant terminates employment.

Insurance | Risk Management | Consulting

Section 4 – Risk Information

Funding future retirement benefits prior to when those benefits become due involves assumptions regarding future economic and demographic experience. These assumptions are applied to calculate actuarial liabilities, current contribution requirements and the funded status of the system. However, to the extent future experience deviates from the assumptions used, variations will occur in these calculated values. These variations create risk to the system. Understanding the risks to the funding of the system is important. Actuarial Standard of Practice No. 51 (“ASOP 51”) requires certain disclosures of potential risks to the system and provides useful information for intended users of actuarial reports that determine system contributions or evaluate the adequacy of specified contribution levels to support benefit provisions.

Under ASOP 51, risk is defined as the potential of actual future measurements deviating from expected future measurements resulting from actual future experience deviating from actuarially assumed experience.

It is important to note that not all risk is negative, but all risk should be understood and accepted based on knowledge, judgement and educated decisions. Future measurements may deviate in ways that produce positive or negative financial impacts to the system.

In the actuary’s professional judgment, the following risks may reasonably be anticipated to significantly affect the system’s future financial condition.

- Investment risk – potential that the investment return will be different than the 7.00% expected in the actuarial valuation
- Longevity risk – potential that participants live longer than expected from the valuation mortality assumptions
- Contribution risk – potential that the contribution will be different than the recommended contribution in the actuarial valuation

The following information is provided to comply with ASOP 51 and furnish beneficial information on potential risks to the system. This list is not all-inclusive; it is an attempt to identify the most significant risks and how those risks might affect the results shown in this report.

Note that ASOP 51 does not require the actuary to evaluate the ability or willingness of the system sponsor to make contributions to the system when due, or to assess the likelihood or consequences of potential future changes in law. In addition, this valuation report is not intended to provide investment advice or to provide guidance on the management or reduction of risk. Gallagher welcomes the opportunity to assist in such matters as part of a separate project or projects utilizing the appropriate staff and resources for those objectives.

Insurance | Risk Management | Consulting

Section 4 (continued)

Investment Risk

System costs are very sensitive to the market return. Any lower than assumed return on assets will increase costs:

- The lower market return will cause the market value of assets to be lower than expected.
- The plan uses a 5-year smoothing method of assets based on the difference between the actual investment income and the expected income to help mitigate volatility year over year.
- Historical experience of market returns is shown in Section 2.4: Summary of Investment Yield Performance. This historical experience illustrates how returns can vary over time.

The Plan invests in a diversified portfolio with the objective of maximizing investment returns at a reasonable level of risk. However, Actuarial Standard of Practice No. 4 ("ASOP 4") requires the actuary to disclose a Low-Default-Risk Obligation Measure ("LDROM") of plan liabilities and provide commentary to help intended users of this report understand the significance of the LDROM with respect to funded status, contributions, and participant benefit security.

The LDROM is based on discount rates derived from low-default-risk fixed income securities whose cash flows are reasonably consistent with the pattern of benefits expected to be paid in the future. The LDROM represents what the Plan's liability would be if the Plan invested its assets solely in a portfolio of high-quality bonds whose cash flows approximately match future benefit payments. The LDROM as of January 1, 2026 is \$1,513,809,042 based on a discount rate of 5.75%. The difference between the LDROM and the Actuarial Accrued Liability can be thought of as representing the expected taxpayer savings / (cost) from investing in the plan's diversified portfolio compared to investing only in high-quality bonds. It may also be thought of as the cost of reducing investment risk.

The interest rate used for the LDROM was determined by calculating a single equivalent discount rate using projected benefit payments and the Gallagher Above Median Yield Curve as of December 31, 2025. Note the interest rate used for the LDROM is based on bond yields applicable at the time of the measurement and will therefore vary for different measurement dates. All other assumptions are the same as those used for funding purposes as shown in this report.

Actuaries play a role in helping the Board determine funding methods and policies that can achieve affordable and appropriate contributions and risk management. The funded status based on Actuarial Accrued Liability and the Actuarially Determined Contributions are determined using the expected return on assets which reflects the actual investment portfolio. Since the assets are not invested in an all-bond portfolio, the LDROM does not indicate the Plan's funded status or progress, nor does it provide information on necessary plan contributions.

Section 4 (continued)

With respect to security of participant benefits, if this plan were to be funded on an LDROM basis, participant benefits currently accrued as of the measurement date may be considered more secure as investment risk may be significantly reduced. However, the assets being invested in a diversified portfolio does not mean the participant benefits are not secure. Security of participant benefits relies on a combination of the assets in the plan, the investment returns generated on those assets, and the promise of future contributions from the plan sponsors. Reducing investment risk by investing solely in bonds may significantly increase Actuarially Determined Contributions and therefore increase contribution risk by decreasing the ability of the plan sponsor to make necessary contributions to fund the benefits. Unnecessarily high contribution requirements in the near term may not be affordable and could imperil plan sustainability and benefit security. Participant benefits will remain secure if reasonable and appropriate contributions with managed risk are calculated and paid.

Longevity Risk

System costs will be increased as participants are expected to live longer. This is because:

- Benefits are paid over a longer lifetime when life expectancy is expected to increase. The longer duration of payments leads to higher liabilities.
- Health care has been improving which increases the life expectancy of participants. As health care improves, costs to the system will increase.
- The mortality assumption for the System does assume future improvement in mortality. Any improvement in future mortality greater than that expected by the current mortality assumption would lead to increased costs for the System.

Contribution Risk

There is a risk associated with the employer's contribution when the actual amount and recommended amount differ. This is because:

- When the actual contribution is lower than the recommended contribution the System may not be sustainable in the long term.
- Any underpayment of the contribution will increase future contribution amounts to help pay off the additional Unfunded Actuarial Accrued Liability associated with any lower than recommended contribution amounts.
- Because of the legislative changes made to the employer contribution amounts, this is a significant risk to the plan. The actuarially determined contribution in this valuation is 14.50% of covered payroll. However, the annual required contribution due to the changes is 14.00% of covered payroll.

Section 4 (continued)

System Maturity Measures:

There are certain measures that may aid in understanding the significant risks to the system.

Ratio of Retired Liability to Total Liability	As of January 1 st				
	2022	2023	2024	2025	2026
1. Retirees and Beneficiaries	882,739,730	867,806,864	845,699,029	829,941,068	818,697,608
2. Total Accrued Liability	1,279,847,074	1,284,040,175	1,298,589,905	1,315,485,060	1,340,909,770
3. Ratio [(1) / (2)]	69.0%	67.6%	65.1%	63.1%	61.1%

A mature system will often have a ratio above 60 - 65 percent. A higher percentage will generally indicate an increased need for asset / liability matching.

Ratio of Cash Flow to Assets	As of December 31 st				
	2021	2022	2023	2024	2025
1. Contributions	62,107,170	63,828,456	62,547,610	69,824,576	71,521,285
2. Benefit Payments	113,687,442	114,552,519	112,122,039	111,877,508	112,147,335
3. Cash Flow [(1) - (2)]	(51,580,272)	(50,724,063)	(49,574,429)	(42,052,932)	(40,626,050)
4. Market Value of Assets	972,827,656	817,867,979	848,169,915	877,055,352	946,666,538
5. Ratio [(3) / (4)]	-5.30%	-6.20%	-5.84%	-4.79%	-4.29%

When this cash flow ratio is negative more cash is being paid out than deposited in the fund. Negative cash flow means the fund needs to rely on investment returns to cover benefit payments and at the same time may need to invest in more liquid assets to cover the benefit payments. More liquid assets may not garner the same returns as less liquid assets and therefore increase the investment risk. However, the low magnitude of the ratio implies there may already be enough liquid assets to cover the benefit payments, less investment return is needed to cover the shortfall, or only a small portion of assets will need to be converted to cash. Therefore, the investment risk is likely not amplified at this time. This maturity measure should be monitored for continual negative trend with greater magnitude.

Section 4 (continued)

Contribution Volatility	As of January 1 st				
	2022	2023	2024	2025	2026
1. Market Value of Assets	972,827,656	817,867,979	848,169,915	877,055,352	946,666,538
2. Payroll	259,440,417	285,949,641	308,111,270	330,637,902	358,326,548
3. Asset Volatility Ratio (AVR) [(1) / (2)]	3.75	2.86	2.75	2.65	2.64
4. Accrued Liability	1,279,847,074	1,284,040,175	1,298,589,905	1,315,485,060	1,340,909,770
5. Liability Volatility Ratio (LVR) [(4) / (2)]	4.93	4.49	4.21	3.98	3.74

Systems that have higher asset-to-payroll ratios experience more volatile employer contributions (as a percentage of payroll) due to investment return. For example, a system with an asset-to-payroll ratio of 10 may experience twice the contribution volatility due to investment return volatility than a system with an asset-to-payroll ratio of 5. Systems that have higher liability-to-payroll ratios experience more volatile employer contributions (as a percentage of payroll) due to changes in liability. For example, if an assumption change increases the liability of two systems by the same percent the system with a liability-to-payroll ratio of 10 may experience twice the contribution volatility than a system with a liability-to-payroll ratio of 5.
